Project Title	Streamlining IT Procurement: Automating Standard Laptop Orders
Maximum Marks	5 Marks

Project Proposal (Proposed Solution) report

The proposal report aims to streamline IT procurement by automating standard laptop orders, reducing manual work and improving visibility of request status. Key features include a standard laptop catalog, an approval workflow, and order and status tracking.

Project Overview	
Objective	The primary objective is to build a simple, centralized system that standardizes laptop requests and automates the approval, ordering and tracking process, saving time and reducing manual follow-ups.
Scope	The project covers laptop request submission, admin approval or rejection, a standard laptop catalog, order creation, status tracking, notifications, a dashboard and basic reports. It is limited to standard laptop models.
Problem Statement	
Description	The existing laptop procurement process can involve manual requests, approval follow-ups, ordering and tracking. This takes time and makes it difficult to monitor request status.
Impact	Solving these issues will reduce manual work, save time, improve visibility of request status, and support standardized laptop ordering.
Proposed Solution	
Approach	A web application where employees submit requests from a standard laptop catalog, admins approve or reject them, and procurement converts approved requests into orders that are tracked until completion.

Key Features	- Online laptop request form with a standard laptop catalog. - Admin approval/rejection with request status and approval history. - Order creation and order status tracking. - Dashboard showing pending, approved, ordered and completed requests. - Status notifications and basic reports.

Resource Requirements

Resource Type	Description	Specification/Allocation
Hardware		
Computing Resources	CPU/GPU specifications, number of cores	Intel Core i3/i5 CPU, 4 cores (no GPU needed)
Memory	RAM specifications	8 GB
Storage	Disk space for data, models, and logs	256 GB SSD
Software		
Frameworks	Python frameworks	Flask
Libraries	Additional libraries	Flask-SQLAlchemy, Flask-Login, Flask-Mail, pandas
Development Environment	IDE	VS Code, PyCharm
Data		
Data	Source, size, format	Standard laptop catalog and request records created by the team, MySQL database
