

PHASE 1 – BRAINSTORMING & IDEATION

Project Title

Streamlining IT Procurement: Automating Standard Laptop Orders

1. Introduction

The Brainstorming and Ideation Phase is the first stage of the project. In this phase, the existing laptop procurement process is studied to identify problems and opportunities for automation.

2. Existing Problem

The traditional laptop procurement process may involve several manual activities such as submitting requests, obtaining approvals, checking requirements, and processing orders.

The major problems identified are:

- Manual and time-consuming request processing.
- Delays in approval.
- Repetitive data entry.
- Errors in request information.
- Difficulty in tracking request status.
- Lack of centralized information.

3. Proposed Solution

The proposed solution is an automated IT procurement system for standard laptop orders.

Employees can submit laptop requests through a standardized process. The request can then move through manager approval, IT review, procurement processing, and order completion.

Basic Workflow

Employee Request → Manager Approval → IT Review → Procurement → Order Completion

4. Objectives

The main objectives are:

- Automate the standard laptop ordering process.
- Reduce manual work.
- Standardize laptop requests.
- Simplify the approval process.
- Reduce processing errors.
- Improve request tracking.
- Provide better visibility of procurement activities.

5. Target Users

The system is intended for:

- Employees – Submit laptop requests.
- Managers – Review and approve requests.
- IT Team – Review technical requirements.
- Procurement Team – Process laptop orders.
- Administrator – Manage system information.

6. Key Features

The proposed system may include:

- Standard laptop request form.
- Laptop selection.
- Manager approval/rejection.
- IT/Procurement review.
- Request status tracking.
- Notifications or workflow updates.
- Centralized request records.

7. Expected Benefits

The system is expected to:

- Reduce manual effort.
- Save processing time.
- Reduce data-entry errors.
- Improve approval management.
- Provide better request tracking.
- Improve communication between employees, managers, IT, and procurement teams.

8. Conclusion

The Brainstorming and Ideation Phase establishes the foundation of the project. The team identified the problems in the existing laptop procurement process and proposed an automated solution to make the process more organized, efficient, and easier to track.
