

PHASE 7 – PROJECT DOCUMENTATION

Project Title

Streamlining IT Procurement: Automating Standard Laptop Orders

1. Introduction

The Project Documentation Phase focuses on preparing complete and organized documentation for the developed IT procurement system. The documentation explains the project idea, requirements, design, development, testing, and final outcome.

2. Documentation Contents

The project documentation includes the following sections:

1. Project Introduction

- Project title.
- Background of the project.
- Purpose of the system.

2. Problem Statement

The problems identified in the existing manual laptop procurement process are explained, such as manual processing, approval delays, data-entry errors, and difficulty in tracking requests.

3. Objectives

The main project objectives and expected benefits are documented.

4. Requirement Analysis

The functional and non-functional requirements, user roles, inputs, outputs, and system requirements are included.

5. Project Design

The system architecture, workflow, modules, database design, and user interface design are documented.

6. Project Development

The development tools, technologies, modules, database implementation, and application workflow are explained.

7. Project Testing

The testing methods, test cases, errors identified, and testing results are documented.

3. Screenshots

Important screenshots of the working project should be included, such as:

- Login page.
- Employee dashboard.
- Laptop selection page.

- Laptop request form.
- Manager approval page.
- Procurement page.
- Request tracking page.
- Final output.

4. Project Results

The final documentation should describe the completed system and its major functions.

The system provides a structured process for:

Laptop Request → Approval → IT Review → Procurement → Order Completion

5. GitHub Documentation

All important project files should be organized and uploaded to the public GitHub repository.

The repository should contain:

- Source code.
- Project documentation.
- Phase-wise documents.
- Screenshots.
- Database files, if required.
- README file.

6. Final Documentation Checklist

- ☐ Project introduction completed.
- ☐ Problem statement included.
- ☐ Objectives documented.
- ☐ Requirements included.
- ☐ Design documented.
- ☐ Development details included.
- ☐ Testing details included.
- ☐ Screenshots added.
- ☐ Results and conclusion added.
- ☐ Files uploaded to GitHub.

7. Conclusion

The Project Documentation Phase provides a complete record of the project development process. Proper documentation helps users, developers, and evaluators understand how the automated IT procurement system was designed, developed, tested, and completed.
